Distribution of Recent
Benthic Foraminifera off the
North American Pacific Coast from
California to Baja

STEPHEN J. CULVER
and
MARTIN A. BUZAS

SERIES PUBLICATIONS OF THE SMITHSONIAN INSTITUTION

Emphasis upon publication as a means of "diffusing knowledge" was expressed by the first Secretary of the Smithsonian. In his formal plan for the Institution, Joseph Henry outlined a program that included the following statement: "It is proposed to publish a series of reports, giving an account of the new discoveries in science, and of the changes made from year to year in all branches of knowledge." This theme of basic research has been adhered to through the years by thousands of titles issued in series publications under the Smithsonian imprint, commencing with *Smithsonian Contributions to Knowledge* in 1848 and continuing with the following active series:

Smithsonian Contributions to Anthropology
Smithsonian Contributions to Astrophysics
Smithsonian Contributions to Botany
Smithsonian Contributions to the Earth Sciences
Smithsonian Contributions to the Marine Sciences
Smithsonian Contributions to Paleobiology
Smithsonian Contributions to Zoology
Smithsonian Folklife Studies
Smithsonian Studies in Air and Space
Smithsonian Studies in History and Technology

In these series, the Institution publishes small papers and full-scale monographs that report the research and collections of its various museums and bureaux or of professional colleagues in the world of science and scholarship. The publications are distributed by mailing lists to libraries, universities, and similar institutions throughout the world.

Papers or monographs submitted for series publication are received by the Smithsonian Institution Press, subject to its own review for format and style, only through departments of the various Smithsonian museums or bureaux, where the manuscripts are given substantive review. Press requirements for manuscript and art preparation are outlined on the inside back cover.

ABSTRACT

Culver, Stephen J., and Martin A. Buzas. Distribution of Recent Benthic Foraminifera off the North American Pacific Coast from California to Baja. *Smithsonian Contributions to the Marine Sciences*, number 28, 634 pages, 131 figures, 2 tables, 1986.—A computer file of all published distributional data (presence or absence) on the recent, living and dead benthic foraminifera off the North American Pacific Coast (California and Baja California) was constructed from 89 papers published since 1896. Manipulation of this file produced 5 catalogs and 131 maps.

Catalog 1 lists alphabetically species names with publication and locality information as recorded in the literature (i.e., unsynonymized). Catalog 2 lists synonymized species names with publication and locality information. Catalogs 3 and 4 list alphabetically all unsynonymized and synonymized species names, respectively. Catalog 5 lists synonymized names by increasing latitude and longitude.

During the past 90 years, 1117 names have been used to record benthic foraminifera in the study area. Through synonymization, this number was reduced to 798, of which 130 occur at 35 or more of the 875 sample localities. Computer-generated maps were drawn for the 130 most commonly recorded species.

Species were grouped by depth and geographic (latitudinal) distributions through visual examination of the maps. Sixty-five species are restricted to depths of less than 200 m, 45 occur mainly at depths of less than 2000 m, 2 only at depths of greater than 200 m, and 18 are ubiquitous with depth. The depth distribution for many species changes with latitude, but this may be due to a poor sampling framework.

Latitudinally, the species are grouped into seven categories. Forty-two species are latitudinally ubiquitous to the study area (Cape Mendocino to Cape San Lucas and the Gulf of California), 52 species occur from Point Conception to Cape San Lucas and in the Gulf of California, 5 species range from Point Conception to Punta Eugenia and are also found in the Gulf of California, 5 species occur from Cape San Lucas to Punta Eugenia and in the Gulf of California, 5 species range from Cape Mendocino to Cape San Lucas, 10 species range from Cape Mendocino to Punta Eugenia, and 11 species occur from Point Conception to Punta Eugenia. A major faunal break occurs at Point Conception.

OFFICIAL PUBLICATION DATE is handstamped in a limited number of initial copies and is recorded in the Institution's annual report, *Smithsonian Year*. SERIES COVER DESIGN: Seascape along the Atlantic coast of eastern North America.

Distribution of Recent Benthic Foraminifera off the North American Pacific Coast from California to Baja

*Stephen J. Culver
and Martin A. Buzas*

Introduction

One hundred and fifty-nine papers concerning benthic foraminifera off the North American Pacific coast from Alaska to Panama were published between 1886 and 1980. This paper represents the first attempt to synthesize the Californian data and is the fifth of a series including and summarizing all published data on the distribution of recent benthic foraminifera around North America. All published distributional data for the east coast are presented in Culver and Buzas (1980) and the results of subsequent analysis are given in Buzas and Culver (1980) and in Culver and Buzas (1981a,b, 1982a). Gulf of Mexico data are given in Culver and Buzas (1981c,d, 1982a, 1983). Distribution data for the Caribbean region are presented in Culver and Buzas (1982b), and the west coast, north of California, is the subject of Culver and Buzas (1985).

The work presented herein can be divided into three main parts. First, there is a reference section consisting of (1) the papers used in compiling the presence-absence data utilized by this study and (2) additional references that are cited in this paper. Second, there are five computer-generated catalogs listing every species recorded in publications between 1896 and 1980 on the North American Pacific coast, off California, Baja California, and in the Gulf of California. Third, there are computer-generated maps of the 130 most commonly recorded species, together with a map showing all sample localities in the study area. Explanatory notes for the catalogs and maps can be found later in this introduction.

Following the format of our studies of the benthic foraminifera off the east coast of North America, the Gulf of Mexico, the Caribbean, and the northwest coast of North America, we have included a key to our concept of each of the 130 most commonly recorded species.

METHODS.—The computerization methods utilized in this work were the same as those described in detail in Culver and Buzas (1980). Of the 159 papers published on the benthic foraminifera of the North American Pacific continental margin, 89 contained data in a form enabling its incorporation in this study. The name of one or more species (living or dead) and the locality where they were found was all that was required. The information typed into the basic compilation file consisted of (1) author of publication, (2) date of publication, (3) generic name used in publication, (4) specific name used in publication, (5) locality, (6) latitude and longitude (see Catalog 1).

When numerous sample sites of a particular study were in very close proximity, they were summarized by a single locality or several representative localities. Thus, all species recorded in the sampled area were considered to have been found at the representative points. In a very few cases, where no detailed locality information was given, a point was arbitrarily chosen to be representative for the records in question. Modification and sorting of this basic file resulted in the production of 5 catalogs which are described below. The 131 maps in this publication are also computer-generated and were drawn on a Calcomp Plotter.

We decided not to include McCulloch's monographic work on eastern Pacific foraminifera (McCulloch, 1977) for logistical and taxonomic reasons.

THE CATALOGS.—Five catalogs are included in this section and are designed to enable the reader to have rapid

Stephen J. Culver, Department of Geological Sciences, Old Dominion University, Norfolk, VA 23508. Martin A. Buzas, Department of Paleobiology, National Museum of Natural History, Smithsonian Institution, Washington, DC 20560.

access to all published distributional data on recent benthic foraminifera off California, Baja California, and in the Gulf of California. Catalog 1 lists (alphabetically by binomen) all the records of every species recorded in the study area and also includes publication and locality information. This catalog contains almost 15,000 entries and around 75,000 pieces of information. Catalog 2 is the synonymized version of Catalog 1 and is identical, except that generic and specific names have been changed where necessary. To aid referral between Catalogs 1 and 2, line numbers starting at 10001 are included at the left-hand margin of the files. Thus, for example, it can be seen that *Elphidium crispum* (Catalog 2, line 15764) was originally recorded (Nicol, 1944) as *Elphidium fax pingue* (Catalog 1, line 15764).

Catalogs 3 and 4 aid rapid use of the first two catalogs. Catalog 3 is an alphabetized list of the 1117 taxa that have been recorded on the North American Pacific continental margin south of Oregon. Catalog 4 lists alphabetically the 798 species recorded in this area after synonymization was achieved by reference to published illustrations and specimens lodged in the USNM collections (National Museum of Natural History, Smithsonian Institution) and the British Museum (Natural History) collections. Catalogs 3 and 4, therefore, are derived directly from Catalogs 1 and 2, respectively.

Catalog 5 is intended for the researcher interested in specific areas. This catalog contains alphabetized lists of synonymized species for each locality (localities are listed by increasing latitude and longitude). If, in the case of synonymized species, the investigator questions the generic or specific name used, he can refer to Catalogs 1 and 2 to find the original name used by the author of the publication in which that species was recorded.

THE MAPS.—One hundred and thirty-one computer-generated maps are included in this section and, like the catalogs, are provided as a reference tool for use in distributional studies of recent benthic foraminifera. Figure 1 illustrates the distribution of all the 875 sample localities included in this study. Three sample localities, apparently plotted on land, are from the Salton Sea. The 183 m and 1830 m submarine contours roughly approximate the edge of the continental shelf and the bottom of the continental slope, respectively. The distribution of the sample localities must be taken into account when examining the maps illustrating the distributions of species.

Figures 2 to 131 are computer-generated maps of the 130 most commonly recorded species. These are species that have been recorded 35 times or more, or at approximately 4% or more of the 875 localities; the figure of 4% was chosen arbitrarily to conform with the studies of the Atlantic continental margin of North America, the Gulf of Mexico, the Caribbean, and the Pacific continental margin north of California (Culver and Buzas, 1980, 1981c, 1982b, 1985). The maps are arranged alphabetically by genera and

by species within each genus.

ACKNOWLEDGMENTS.—We thank Dante Piacesi and Ken McCormick for their considerable efforts in the computer production of this work. D.A. Diddi, L. Collins, S. Richardson, J. Ashmore, and A. Lanham contributed invaluable library research and secretarial services. Dr. C.G. Adams kindly allowed access to British Museum (Natural History) collections.

Discussion

The main purpose of this publication is to present all the published distributional data of recent benthic foraminifera from the North American Pacific continental margin off California, Baja California, and in the Gulf of California. A total of 1117 taxa have been recorded in this region from 875 localities. Synonymization reduced this number to 798. Of these 798 species, 130 occurred at 35 or more of the 875 localities; that is, 16% of the species occur at 4% or more of the sample localities.

Distributional data have been summarized by tabulation. Table 1 is a synopsis of depth distribution and Table 2 summarizes latitudinal distribution. Depth distribution of the 130 most commonly recorded species was determined through visual inspection of the maps.

The sampling framework must be taken into account when considering these depth distributions. There is a vast amount of information off southern California and very poor sample coverage off the west coast of Baja California. The Gulf of California is well sampled at all depths, whereas the bathyal and abyssal region of the Pacific continental margin from Cape Mendocino to Cape San Lucas is relatively poorly sampled, except in the eastern part of the California Borderland. This sample framework is the probable reason why species in the "ubiquitous" category (Table 1) often have their deeper records in the Gulf of California. We attempted to identify those taxa showing true southward or northward submergence or emergence but such patterns are equivocal due to the sample coverage.

The narrow nature of the continental margin and the scale of this study result in the gross depth classification of Table 1. This table is intended as a guide to depth distribution of species, and the reader is not only encouraged to peruse the maps for the taxa of interest but is also alerted to the extremely variable submarine topography of the California Borderland.

The distribution of the species defines the categories that are overlapping. One hundred and twenty-eight of the 130 species occur at shelf depths. The exceptions are *Hoeglundina elegans* and *Melonis barleeanus*, which are only found deeper than 200 m.

Latitudinal distribution of recent benthic foraminifera is the subject of Table 2. Visual examination of Figures 2–131 resulted in seven categories of distribution. Again, a

priori categories were not set up; the distribution of the species defines the categories. Table 2 is based solely on the data presented in this study and does not take into account distributional data to the north or south of the area covered by this publication. Again, the reader is encouraged to use Table 2 as a guide, because placement of taxa in distributional categories is somewhat subjective due to the variable density of samples.

Forty-two species are ubiquitous in the study area ranging from Cape Mendocino to Cape San Lucas and the Gulf of California. The major faunal break is at Point Conception: sixty-eight species are not found farther north in the area covered by this publication. Point Conception is recognized as an important provincial boundary for other groups of organisms (e.g., Valentine, 1966; Horn and Allen, 1978; Brusca and Wallerstein, 1979).

Summary

1. All published data on the distribution of recent benthic foraminifera of the North American Pacific conti-

ental margin off California, Baja California, and in the Gulf of California are presented in the form of 5 catalogs and 131 maps.

2. 1117 taxa have been recorded in the area of study.

3. The taxa have been reduced to 798 by synonymization.

4. Of the 798 synonymized species, 130 occur at 35 or more of the sample locations; that is, 16% of the species occur at 4% or more of the 875 sample localities.

5. Three groups of commonly recorded species characterize gross overlapping depth zones. Sixty-five species occur at depths of less than 200 m, 45 at depths of less than 2000 m, and two species are only found deeper than 200 m.

6. Another group, containing 10 species, is ubiquitous, occurring at neritic, bathyal, and abyssal depths.

7. Many species appear to change their depth distribution with latitude but this pattern may be an artifact of the sampling framework.

8. Seven overlapping categories of biogeographic (latitudinal) patterns are recognizable. Fifty-two species range

from Cape San Lucas to Point Conception and into the Gulf of California, 5 species range from Point Conception to Punta Eugenia and into the Gulf, and 5 species range from Punta Eugenia to Cape San Lucas and into the Gulf. Five species are restricted to the region between Cape Mendocino and Cape San Lucas, 11 species between Point Conception and Punta Eugenia, and 10 species between Cape Mendocino and Punta Eugenia.

9. Another group, containing 42 species, is ubiquitous in its geographic distribution in the area of study.

10. A major faunal break is apparent at Point Conception.

Key to the Species on the Maps

Following Culver and Buzas (1980, 1981c, 1982b, 1985), we list below a key to our concept of the 130 most commonly recorded species on the North American Pacific continental margin off the Californias. Genera are listed alphabetically, as are the species within each genus. Under each species, the reference or references are given where the reader can find published illustrations that adequately convey our concept of each of the commonly recorded species in this study. Many of the 130 species are also included in the keys to commonly recorded species for the east coast of North

America, the Gulf of Mexico, the Caribbean and the west coast, north of California (Culver and Buzas, 1980, 1981c, 1982b, 1985): the references given here for these species are generally the same.

- Chilostomella ovoidea* Reuss: Crouch, 1952:841, pl. 7: fig. 1.
- Chrysalidina spectabilis* Cushman and McCulloch: Cushman and McCulloch, 1948:256, pl. 32: figs. 1–7.
- Cibicides fletcheri* Galloway and Wissler: Uchio, 1960, pl. 10: figs. 1–3. Bergen and O'Neil, 1979:1289, pl. 1: fig. 17.
- Cibicides lobatulus* (Walker and Jacob): Sen Gupta, 1971:89, pl. 2: figs. 34–36.
- Cibicides mckannai* Galloway and Wissler: Bergen and O'Neil, 1979:1289, pl. 3: figs. 8–10 [as *Cibicides* aff. *mckannai*].
- Cibicides refugius* (Montfort): Loeblich and Tappan, 1964:C688, fig. 554 (1a–c).
- Cyclogyra involvens* (Reuss): Schafer and Cole, 1978:27, pl. 7: fig. 6a,b.
- Dentalina baggi* Galloway and Wissler: Cushman and McCulloch, 1950:313, pl. 41: figs. 13, 14.
- Dentalina decepta* (Bagg): Cushman and McCulloch, 1950:311, pl. 41: figs. 11, 12.
- Discorbis lomaensis* (Bandy): Bandy, 1953:179, pl. 22: fig. 6 [as *Rotalia lomaensis*].
- Dyocibicides biserialis* Cushman and Valentine: Todd and Low, 1967:A35, pl. 5: fig. 3.
- Ergerella advena* (Cushman): Cushman, 1922:57, pl. 9: figs. 7–9 [as *Verneu-riina advena*].
- Elphidiella hannah* (Cushman and Grant): Cushman and McCulloch, 1940:177, pl. 20: fig. 11.
- Elphidium articulatum* (d'Orbigny): Parker, 1952a:411, pl. 5: figs. 5, 7.
- Elphidium crispum* (Linné): Nicol, 1944:177, pl. 29: figs. 3, 11 [as *Elphidium fax fax*].
- Elphidium incertum* (Williamson): Buzas, 1966:592, pl. 72: figs. 1–6.
- Elphidium spinatum* Cushman and Valentine: Lankford and Phleger, 1973:118, pl. 3: fig. 23.
- Elphidium translucens* Natland: Lankford and Phleger, 1973:118, pl. 3: fig. 22 [as *Cribolephidium spinatum* var. *translucens*].
- Elphidium tumidum* Natland: Natland, 1938:144, pl. 5: figs. 5, 6.
- Epistominella bradyana* (Cushman): Cushman, 1927:165, pl. 5: figs. 11–13 [as *Pulvinulinella bradyana*].
- Epistominella exigua* (Brady): Phleger and Parker, 1951:28, pl. 15: figs. 6, 7 [as *Pseudoparrella exigua*].
- Epistominella smithi* (Stewart and Stewart): Stewart and Stewart, 1930:70, pl. 9: fig. 4a–c [as *Pulvinulinella smithi*].
- Eponides leviculus* (Resig): Bergen and O'Neil, 1979:1290, pl. 4: figs. 22–24.
- Fissurina lucida* (Williamson): Todd and Low 1967:A28, pl. 3: fig. 31.
- Furzenkoina seminuda* (Natland): Natland, 1938:145, pl. 5: fig. 12 [as *Virgulina seminuda*].
- Gaudryina arenaria* Galloway and Wissler: Cushman and McCulloch, 1939:91, pl. 8: figs. 2, 3.
- Gaudryina atlantica* (Bailey): Cushman, 1922:70, pl. 13: figs. 1–3.
- Gavelinopsis campanulata* (Galloway and Wissler): Lankford and Phleger, 1973:120, pl. 5: fig. 13.
- Globobulimina auriculata* (Bailey): Schnitker, 1971:202, pl. 5: fig. 6.
- Globobulimina pacifica* Cushman: Bergen and O'Neil, 1979:1290, pl. 6: fig. 9.
- Goessella flintii* Cushman: Cushman and McCulloch, 1939:98, pl. 10: figs. 4–9.
- Hanzawaia nitidula* (Bandy): Bandy, 1953:178, pl. 22: fig. 3 [as *Cibicidina basitoba* var. *nitidula*]. Lankford and Phleger, 1973:122, pl. 6: fig. 19.
- Haplophragmoides advenum* Cushman: Cushman and McCulloch, 1939:72, pl. 5: fig. 7.
- Haplophragmoides columbiensis* Cushman: Cushman and McCulloch, 1939:72, pl. 5: figs. 8–10 [as *Haplophragmoides columbiensis*].
- Haplophragmoides planissimus* Cushman: Cushman, 1927:135, pl. 1: fig. 6 [as *Haplophragmoides planissimus*].
- Hoglundina elegans* (d'Orbigny): Schnitker, 1971:204, pl. 10: fig. 15.
- Islandiella californica* (Cushman and Hughes): Bergen and O'Neil, 1979:1289, pl. 2: figs. 23, 24 [as *Cassidulina californica*].
- Islandiella limbata* (Cushman and Hughes): Bergen and O'Neil, 1979:1289, pl. 2: figs. 3–5 [as *Cassidulina limbata*].
- Islandiella tortuosa* (Cushman and Hughes): Todd and Low, 1967:A38, pl. 5: fig. 12 [as *Cassidulina tortuosa*].
- Lagena amphora* Reuss: Cushman and McCulloch, 1950:329, pl. 43: figs. 11–14.
- Lagena apiopleura* Loeblich and Tappan: Bergen and O'Neil, 1979:1291, pl. 2: fig. 19.
- Lagena dentaliformis* Bagg: Cushman and McCulloch, 1950:337, pl. 44: figs. 10, 11.
- Lagena elongata* (Ehrenberg): Todd and Low, 1967:A24, pl. 3: fig. 22.
- Lagena hispidula* Cushman: Cushman and McCulloch, 1950:339, pl. 45: figs. 8–10.
- Lagena perlucida* (Montagu): Cushman and McCulloch, 1950:342, pl. 46: figs. 1, 2.

- Lagena plicicrca* Cushman and Gray: Todd and Low, 1967:A25, pl. 3: fig. 19.
- Lagena sesquistriata* Bagg: Cushman and McCulloch, 1950:350, pl. 46: figs. 12-15.
- Lagena spicata* Cushman and McCulloch, 1950:360, pl. 48: figs. 3-7 [as *Lagena sulcata* var. *spicata*].
- Lagena striata* (d'Orbigny): Todd and Low, 1967:A25, pl. 3: fig. 20.
- Lagena sulcata* (Walker and Jacob): Cushman and McCulloch, 1950:335, pl. 48: fig. 2 [as *Lagena* cf. *sulcata*].
- Lenticulina cultratus* (Montfort): Cushman and McCulloch, 1950:296, pl. 37: figs. 3, 4 [as *Robulus* cf. *cultratus*].
- Lenticulina orbicularis* (d'Orbigny): Cushman and McCulloch, 1950:296, pl. 38: figs. 4-7 [as *Robulus orbicularis*].
- Lenticulina strongi* (Church): Cushman and McCulloch, 1950:295, pl. 37: figs. 1, 2 [as *Robulus strongi*].
- Marginalina glabra* d'Orbigny: Cushman and McCulloch, 1950:308, pl. 40: figs. 6-8.
- Melonis barleeanus* (Williamson): Cushman, 1927:149, pl. 2: fig. 5 [as *Nonion umbilicatum* var. *pacifica*].
- Nodosaria perversa* Schwager: Cushman and McCulloch, 1950:318, pl. 41: figs. 26-32 [as *Nodosaria* cf. *perversa*].
- Nodosaris subsularis* Cushman: Cushman and McCulloch, 1950:319, pl. 41: figs. 21-24.
- Nonionella basispinata* Cushman and Moyer: Cushman and McCulloch, 1940:158, pl. 17: figs. 8, 9, pl. 18: figs. 4, 5 [as *Nonion pizarense* var. *basispinatum*].
- Nonionella grateloupi* (d'Orbigny): Schnitker, 1971:206, pl. 10: fig. 6 [as *Nonion grateloupi*].
- Nonionella stella* Cushman and Moyer: Cushman and McCulloch, 1940:162, pl. 18: fig. 2 [as *Nonionella miocena* var. *stella*].
- Nouria polymorphinoides* Heron-Allen and Earland: Parker, Phleger, and Peirson, 1953:11, pl. 3: figs. 1, 2.
- Oolina melo* d'Orbigny: Schafer and Cole, 1978:28, pl. 6: fig. 5.
- Oolina striatopunctata* (Parker and Jones): Todd and Low, 1967:A29, pl. 3: fig. 25.
- Patellina corrugata* Williamson: Schnitker, 1971:206, pl. 6: fig. 12.
- Planulina ornata* (d'Orbigny): Bandy, 1954:137, pl. 31: fig. 2.
- Pullenia salisburyi* Stewart and Stewart: Todd and Low, 1967:A38, fig. 20.
- Quinqueloculina angulostriata* Cushman and Valentine: Lankford and Phleger, 1973:125, pl. 1: figs. 21, 22.
- Quinqueloculina costata* d'Orbigny: Cushman and Valentine, 1930:12, pl. 3: fig. 1a-c.
- Quinqueloculina laevigata* d'Orbigny: Lankford and Phleger, 1973:126, pl. 1: figs. 5, 6.
- Quinqueloculina lamarkiana* d'Orbigny: Schnitker, 1971:208, pl. 3: fig. 16.
- Reophax curtus* Cushman: Sen Gupta, 1971:84, pl. 1: figs. 2-4.
- Reophax excentricus* Cushman: Cushman and McCulloch, 1939:60, pl. 3: figs. 4-9.
- Reophax gracilis* (Kiaer): Phleger, 1964:383, pl. 3: fig. 2.
- Reophax nanus* Rhumbler: Parker, Phleger, and Pierson, 1953:13, pl. 1: fig. 11.
- Reophax scorpiurus* Montfort: Cushman, 1920:6, pl. 1: figs. 5-7.
- Reussella aequa* Cushman and McCulloch: Cushman and McCulloch, 1948:251, pl. 31: fig. 7.
- Robertinoides charlottensis* (Cushman): Cushman and Todd, 1947:18, pl. 3: fig. 2 [as *Robertina charlottensis*].
- Rosalina columbiensis* (Cushman): Lankford and Phleger, 1973:127, pl. 5: figs. 10-12.
- Rosalina globularis* d'Orbigny: Cushman, 1931:22, pl. 4: fig. 9a-c [as *Discorbis globularis*].
- Rosalina monicana* (Zalesny): Zalesny, 1959:122, pl. 1: fig. 4a-c [as *Discorbis monicana*].
- Saccamina atlantica* (Cushman): Sen Gupta, 1971:83, pl. 1: fig. 1.
- Saracenaria angularis* Natland: Cushman and McCulloch, 1950:326, pl. 42: figs. 8-12.
- Spirillina vivipara* Ehrenberg: Cushman, 1931:3, pl. 1: figs. 1-4.
- Textularia articulata* d'Orbigny: Lalicker and McCulloch, 1940:118, pl. 13: fig. 3a-d.
- Textularia candeiana* d'Orbigny: Schnitker, 1971:212, pl. 1: fig. 10.
- Textularia conica* d'Orbigny: Schnitker, 1971:212, pl. 1: fig. 11.
- Textularia corrugata* Heron-Allen Earland: Lalicker and McCulloch, 1940:126, pl. 14: fig. 9a-d.
- Textularia earlandi* Phleger: Schafer and Cole, 1978:29, pl. 3: fig. 4.
- Textularia foliacea* Heron-Allen and Earland: Lalicker and McCulloch, 1940:128, pl. 14: fig. 11a-c.
- Textularia schencki* Cushman and Valentine: Lalicker and McCulloch, 1940:128, pl. 16: fig. 23a-c.
- Trifarina angulosa* (Williamson): Sen Gupta, 1971:89, pl. 2: figs. 16, 17.
- Trifarina carinata* (Cushman): Cushman and McCulloch, 1948:281, pl. 35: figs. 8, 11 [as *Angulogerina carinata*].
- Trifarina hughesi* (Galloway and Wissler) *picta* (Todd): Cushman and McCulloch, 1948:290, pl. 36: fig. 3 [as *Angulogerina hughesi* var. *picta*].
- Trifarina occidentalis* (Cushman): Cushman and McCulloch, 1948:291, pl. 36: fig. 4 [as *Angulogerina occidentalis*].
- Trifarina semitrigona* (Galloway and Wissler): Cushman and Todd, 1947:19, pl. 3: fig. 7 [as *Angulogerina semitrigona*].
- Triloculina inflata* d'Orbigny: Lankford and Phleger, 1973:130, pl. 2: fig. 18.
- Triloculina trigonula* (Lamarck): Schnitker, 1971:212, pl. 3: fig. 11.
- Trochammina charlottensis* Cushman: Lankford and Phleger, 1973:130, pl. 3: figs. 3, 4.
- Trochammina inflata* (Montagu): Parker, 1952b:459, pl. 3: fig. 1a,b.
- Trochammina kelleettae* Thalman: Cushman and McCulloch, 1939:101, pl. 11: fig. 1.
- Trochammina pacifica* Cushman: Cushman and McCulloch, 1939:103, pl. 11: fig. 3.
- Trochammina squamiformis* Cushman and McCulloch: Cushman and McCulloch, 1939:18, pl. 12: fig. 4.
- Uvigerina baggi* Galloway and Wissler: Cushman and McCulloch, 1948:281, pl. 35: fig. 7 [as *Angulogerina baggi*].
- Uvigerina juncea* Cushman and Todd: Bergen and O'Neil, 1979:1292, pl. 3: fig. 4.
- Uvigerina peregrina* Cushman: Cushman, 1923:166, pl. 42: figs. 7-10. Pflum and Frerichs, 1976:108, pl. 8: figs. 2, 3 [as *Uvigerina peregrina peregrina*].
- Uvigerina senticosa* Cushman: Cushman and McCulloch, 1948:269, pl. 34: fig. 7.

REQUIREMENTS FOR SMITHSONIAN SERIES PUBLICATION

Manuscripts intended for series publication receive substantive review (conducted by their originating Smithsonian museums or offices) and are submitted to the Smithsonian Institution Press with Form SI-36, which must show the approval of the appropriate authority designated by the sponsoring organizational unit. Requests for special treatment—use of color, foldouts, case-bound covers, etc.—require, on the same form, the added approval of the sponsoring authority.

Review of manuscripts and art by the Press for requirements of series format and style, completeness and clarity of copy, and arrangement of all material, as outlined below, will govern, within the judgment of the Press, acceptance or rejection of manuscripts and art.

Copy must be prepared on typewriter or word processor, double-spaced, on one side of standard white bond paper (not erasable), with 1¼" margins, submitted as ribbon copy (not carbon or xerox), in loose sheets (not stapled or bound), and accompanied by original art. Minimum acceptable length is 30 pages.

Front matter (preceding the text) should include: **title page** with only title and author and no other information, **abstract page** with author, title, series, etc., following the established format; table of **contents** with indents reflecting the hierarchy of heads in the paper; also, **foreword** and/or **preface**, if appropriate.

First page of text should carry the title and author at the top of the page; **second page** should have only the author's name and professional mailing address, to be used as an unnumbered footnote on the first page of printed text.

Center heads of whatever level should be typed with initial caps of major words, with extra space above and below the head, but no other preparation (such as all caps or underline, except for the underline necessary for generic and specific epithets). Run-in paragraph heads should use period/dashes or colons as necessary.

Tabulations within text (lists of data, often in parallel columns) can be typed on the text page where they occur, but they should not contain rules or numbered table captions.

Formal tables (numbered, with captions, boxheads, stubs, rules) should be submitted as carefully typed, double-spaced copy separate from the text; they will be typeset unless otherwise requested. If camera-copy use is anticipated, do not draw rules on manuscript copy.

Taxonomic keys in natural history papers should use the aligned-couplet form for zoology and may use the multi-level indent form for botany. If cross referencing is required between key and text, do not include page references within the key, but number the keyed-out taxa, using the same numbers with their corresponding heads in the text.

Synonymy in zoology must use the short form (taxon, author, year:page), with full reference at the end of the paper under "Literature Cited." For botany, the long form (taxon, author, abbreviated journal or book title, volume, page, year, with no reference in "Literature Cited") is optional.

Text-reference system (author, year:page used within the text, with full citation in "Literature Cited" at the end of the text) must be used in place of bibliographic footnotes in all Contributions Series and is strongly recommended in the Studies Series: "(Jones, 1910:122)" or "... Jones (1910:122)." If bibliographic

footnotes are required, use the short form (author, brief title, page) with the full citation in the bibliography.

Footnotes, when few in number, whether annotative or bibliographic, should be typed on separate sheets and inserted immediately after the text pages on which the references occur. Extensive notes must be gathered together and placed at the end of the text in a notes section.

Bibliography, depending upon use, is termed "Literature Cited," "References," or "Bibliography." Spell out titles of books, articles, journals, and monographic series. For book and article titles use sentence-style capitalization according to the rules of the language employed (exception: capitalize all major words in English). For journal and series titles, capitalize the initial word and all subsequent words except articles, conjunctions, and prepositions. Transliterate languages that use a non-Roman alphabet according to the Library of Congress system. Underline (for italics) titles of journals and series and titles of books that are not part of a series. Use the parentheses/colon system for volume (number): pagination: "10(2):5-9." For alignment and arrangement of elements, follow the format of recent publications in the series for which the manuscript is intended. Guidelines for preparing bibliography may be secured from Series Section, SI Press.

Legends for illustrations must be submitted at the end of the manuscript, with as many legends typed, double-spaced, to a page as convenient.

Illustrations must be submitted as original art (not copies) accompanying, but separate from, the manuscript. Guidelines for preparing art may be secured from Series Section, SI Press. All types of illustrations (photographs, line drawings, maps, etc.) may be intermixed throughout the printed text. They should be termed **Figures** and should be numbered consecutively as they will appear in the monograph. If several illustrations are treated as components of a single composite figure, they should be designated by lowercase italic letters on the illustration; also, in the legend and in text references the italic letters (underlined in copy) should be used: "Figure 9b." Illustrations that are intended to follow the printed text may be termed **Plates**, and any components should be similarly lettered and referenced: "Plate 9b." Keys to any symbols within an illustration should appear on the art rather than in the legend.

Some points of style: Do not use periods after such abbreviations as "mm, ft, USNM, NNE." Spell out numbers "one" through "nine" in expository text, but use digits in all other cases if possible. Use of the metric system of measurement is preferable; where use of the English system is unavoidable, supply metric equivalents in parentheses. Use the decimal system for precise measurements and relationships, common fractions for approximations. Use day/month/year sequence for dates: "9 April 1976." For months in tabular listings or data sections, use three-letter abbreviations with no periods: "Jan, Mar, Jun," etc. Omit space between initials of a personal name: "J.B. Jones."

Arrange and paginate sequentially every sheet of manuscript in the following order: (1) title page, (2) abstract, (3) contents, (4) foreword and/or preface, (5) text, (6) appendixes, (7) notes section, (8) glossary, (9) bibliography, (10) legends, (11) tables. Index copy may be submitted at page proof stage, but plans for an index should be indicated when manuscript is submitted.
